

I Claim:

1. An apparatus for separating soil, the apparatus comprising:
 - a frame;
 - a cylinder associated with the frame;
 - a plurality of discs attached to the frame wherein the cylinder moves the frame; and
 - a controller associated with the cylinder wherein the controller is remote from the frame and controls movement of the frame.
2. The apparatus of Claim 1 further comprising:
 - a front cylinder on the frame.
3. The apparatus of Claim 1 further comprising:
 - a pillar associated with the frame; and
 - a column inside the pillar.
4. The apparatus of Claim 3 further comprising:
 - a liner attached to an inside of the pillar of the frame.
5. The apparatus of Claim 3 further comprising:
 - plates inside the pillar supporting the column.
6. The apparatus of Claim 1 further comprising:
 - a hitch having a length defined between an end and a connector wherein the end of the hitch is attachable to the frame.
7. The connector of Claim 6 wherein the connector rotates 360 degrees.
8. The apparatus of Claim 1 further comprising:
 - tires supporting the frame.
9. The apparatus of Claim 8 further comprising:
 - a plug in each of the tires of the frame.
10. A method for dividing soil, the method comprising the steps of:
 - providing a frame;

providing a cylinder associated with the frame;
connecting the frame to a tractor;
moving the frame by remotely controlling movement
of the cylinder; and
pulling the frame over the soil.

11. The method of Claim 10 further comprising the step
of:

providing a plurality of discs attached to the
frame.

12. The method of Claim 10 further comprising the step
of:

controlling elevation of the frame by adjusting the
cylinder.

13. The method of Claim 10 further comprising the step
of:

adjusting an angle of the frame with the soil by
adjusting the cylinder.

14. The method of Claim 10 further comprising the step
of:

self-adjusting the cylinder of the frame for
controlling the angle of the frame with the soil.

15. An apparatus for separating soil, the apparatus
comprising:

a frame;

a plurality of discs attached to the frame;

a pillar associated with the frame wherein the
pillar has a liner attached to an inside of the pillar
of the frame; and

a column inside the pillar wherein plates associated
with the pillar support the column.

16. The apparatus of Claim 15 further comprising:
a cylinder associated with the frame wherein the cylinder moves the pillar and the frame relative to the inside column.
17. The apparatus of Claim 15 further comprising:
a front cylinder on the frame wherein the front cylinder moves to adjust the angle of the frame relative to the soil.
18. The apparatus of Claim 15 further comprising:
a hitch having a length defined between an end and a connector wherein the end of the hitch is attachable to the frame.
19. The connector of Claim 18 wherein the connector rotates 360 degrees.
20. The apparatus of Claim 15 further comprising:
tires supporting the frame.
